

Basit Qayoom

Software Engineer

+(91) 9682132612

Noida, IN 201309

basitqayoomchowdhary@gmail.com

Software Engineer with 2.5 years of experience building scalable, high-performance frontend platforms. Proficient in JavaScript, TypeScript, React.js, and Next.js with strong expertise in micro-frontend architecture and design system development. Experienced in frontend performance optimization and security auditing across multi-repository product ecosystems. Proven ability to take full ownership—from architecture and development to release, monitoring, and iterative refinement. Focused on maintainable system design, developer productivity, and long-term application scalability.

PROFESSIONAL EXPERIENCE

Physics Wallah (July 2023 - Present)

Software Engineer (SWE I)

- Led the development of a real-time, chat-based communication platform that drove Physics Wallah's mentorship business, generating over **₹100 crore** revenue. Key features included WebSocket-powered messaging and Agora SDK integration for low-latency audio/video calling, enhanced with capabilities like screen sharing, voice messages, file uploads, and automated read receipts. Developed a sophisticated UI using a modular **Container-Presentational** architecture complemented by 25+ custom hooks to manage critical functionalities such as session timers, monetization workflows, and intricate UI interactions.
- Led the modernization of the LMS platform by migrating from a legacy iframe-based architecture to a micro-frontend system, enabling independent deployments, improved scalability, and modular code ownership. *(This architecture supports ~2M daily active users across all post-login applications.)*
- Optimized frontend performance by reducing bundle size from **~12MB** → **<2MB** and improving initial load time from **~15s** → **<5s** using Module Federation, CDN-based delivery, service-worker caching, and asset-level compression.
- Designed and delivered a comprehensive **Design System / UI Component Library** featuring multi-theme support, accessibility standards, CSS Modules, and Storybook-driven documentation, ensuring visual consistency and reducing duplicated UI effort across teams.
- Architected and maintained in-house **SDKs** for authentication, API clients, feature flagging, contextual configuration, and analytics—standardizing integrations across micro-frontends, reducing error-prone code, and improving system cohesion.
- Built a **Core Web Vitals auditing & reporting pipeline** that continuously collects performance metrics from major user flows and surfaces insights for proactive debugging and performance benchmarking.
- Established **standardized frontend engineering practices** across multiple repositories, including coding conventions, semantic versioning, review workflows, and reusable starter boilerplates.
- Conducted **performance and security audits** across distributed applications to identify bottlenecks, enforce secure patterns, and improve runtime stability.
- Owned product delivery end-to-end: architecture, development, release pipelines, production monitoring, and iterative optimization.

Indian Institute of Technology (IIT) Ropar (Dec 2021 - Jan 2022)

Project Intern

- Developed a data-driven model to optimize chemical process workflows, achieving a 20% improvement in process efficiency through statistical analysis and simulation techniques.
- Proposed an advanced resource management strategy based on utilization data, with strong potential to reduce operational costs and improve sustainability in chemical engineering operations.

EDUCATION

National Institute of Technology Srinagar (NITSRI)

Bachelor of Technology, Chemical Engineering | 2019 – 2023

- CGPA: 8.06 / 10

SKILLS

- **Frontend:** HTML, CSS, JavaScript (ES6+), TypeScript, ReactJS, Next.js,, Tailwind CSS, Framer Motion, Storybook, Micro-Frontend (Module Federation)
- **Backend & APIs:** Node.js, Express.js, MongoDB, RESTful APIs, WebSockets, Firebase
- **Programming Languages & Concepts:** C, C++, Python, Go, Data Structures & Algorithms, Object-Oriented Programming
- **DevOps & Tools:** Git, GitLab, Docker, CI/CD, Google Cloud
- **Build & Bundlers:** Vite, Webpack, Rollup, ESBuild, RsBuild
- **Other:** StencilJS, Lit.dev, Zod, Linting, Prettier, Husky
- **Testing & Monitoring:** Jest, Postman, Mocha, JMeter, Sentry, Core Web Vitals, Lighthouse
- **Soft Skills:** Leadership, Cross-Functional Collaboration, Decision-Making, Adaptability, Conflict Resolution, Critical Thinking, Time & Task Management, Communication, Problem-Solving, Accountability, Attention to Detail, Strategic Thinking

PROJECTS & PRESENTATIONS

- Improved wood porosity through chemical treatments and analyzed samples with SEM, XRD, FTIR, and TGA. Developed membranes for micro- and ultrafiltration applications.
- Presented a poster on wood-based nanotechnology membranes at the 2023 *Nanotechnology for Better Living* conference (NIT Srinagar, SKUAST, IIT BHU). [[Link](#)]

LEADERSHIP & ACHIEVEMENTS

- Nominated for the “**Champion of the Quarter**” award at *Physics Wallah* for outstanding performance.
- Awarded “**Star Performer of the Month - July 2025**” at *Physics Wallah* for delivering impactful in-house engineering solutions.
- Awarded *Best Delegate* in the *International Press* category at the Model United Nations held at NIT Srinagar, recognizing excellence in research, communication, and integrity [[Link](#)].
- Organized a *Model UN* event with over 200 participants, fostering global awareness and enhancing collaborative problem-solving skills to create a positive societal impact.
- Led the Technical Club at NIT Srinagar, driving technology adoption and innovation by organizing workshops, hackathons, and technical sessions that enriched the campus community.
- **GATE 2025 Qualified** – *Data Science*.
